

How to use this pick deck

THIS IS A LIBRARY

This is not a linear presentation. Select only the slides that match the buyer, catalyst, lifecycle moment and desired depth. Build a client-ready story for the conversation.

SELECT THE RIGHT MATERIAL

01 Buyer

Who is making the decision?

02 Catalyst

Why does modernization matter now?

03 Lifecycle moment

Rationalize, Build or Sustain

04 Depth

Choose the relevant level of detail

05 Proof + next step

End with relevant evidence and an action

BUILD THE STORY

1. Start with the buyer and catalyst.
2. Follow the narrative spine.
3. Choose only the relevant depth.
4. End with proof and a next step.

INTERNAL ONLY – REMOVE THIS SLIDE AND ALL INTERNAL SECTION GUIDES BEFORE EXTERNAL SHARING.

Modernization economics in the AI age

01 Economics shift

3–5: AI changes cost and the strategic buy-versus-build choice.

02 Business value

6, 9: Delivery, continuity, effort and possible value directions.

03 Use cases & catalysts

10–11: What changes, why now and how value is measured.

04 Ecosystem scope

12: See the applications, data, workflows and human handoffs.

The script has flipped on application modernization

AI reduces time and cost across analysis, design, build, testing and transition.

How are legacy systems holding your business back?

If modernization cost one-tenth of what you expect, what could that unlock?

AI-NATIVE READINESS

How could you become AI-native?

GROWTH VELOCITY

Where do release delays limit growth?

COST EFFICIENCY

Where could fewer handoffs cut cost?

CUSTOMER MOAT

How could connected journeys deepen loyalty?

AI shifts buy versus build toward strategic fit

BUY

Accelerate standard capabilities

BEST WHEN

- Standard market needs
- Speed to value matters
- Customization is secondary

TRADE-OFFS

- Process compromise
- Licensing constraints
- Vendor roadmap constraints

BUILD

Own differentiated capabilities

BEST WHEN

- Workflows differentiate
- Control data and experience
- Own the product roadmap

TRADE-OFFS

- Durable product team
- Durable engineering team
- Ongoing maintenance

MODERNIZATION ECONOMICS

AI lowers cost at every stage

PLAN & UNDERSTAND

Faster discovery, mapping and requirements

Validate cost and change burden for each client.

IMPLEMENT & BUILD

Accelerate coding, testing and migration

Revisit prior assumptions on cost and speed.

MAINTAIN LEGACY

Reduce run cost and reliance on scarce skills

Ownership still includes maintenance.

As AI lowers planning, build and run costs, choose by strategic fit, differentiation and ownership.

Custom software scales what makes you unique

WHY BUILD

Make software conform to the business

- 01 Unique processes**
Encode unique workflows and decisions.
- 02 Familiar language**
Keep the language people already use.
- 03 Selective modernization**
Change selectively; keep what works.

CHANGE ON YOUR TERMS

Less translation;
focused retraining.

ADVANTAGE 01 | DIFFERENTIATION

Scale what makes you unique

Turn distinctive capabilities into repeatable, software-enabled operations.

ADVANTAGE 02 | CHANGE IMPACT

Modernize without upheaval

Preserve familiar processes, roles and vocabulary that still create value.

Build when differentiation matters and you want to choose where the business changes—and where software adapts.

Three programs turn modernization into business value

HEALTHCARE ASSOCIATION

01 Application rewrite

A critical customer application was assessed and rewritten in less than half the traditional timeline.

12 → 5

months

58%

faster delivery

BUSINESS VALUE

Security, maintainable delivery and lower release risk.

INVESTOR-OWNED UTILITY

02 Interconnection platform

A critical platform was modernized across six operating companies without disrupting service.

6

companies

~700K

lines modernized

BUSINESS VALUE

Lower cutover risk; scalable interconnection.

HR COMPLIANCE PROVIDER

03 Compliance reporting

A legacy platform was redesigned for faster customer reports and lower operating cost.

65%

faster reports

\$30K

avg./client

BUSINESS VALUE

Faster reports and lower client cost.

Source: Illustrative client outcomes; the 12-month baseline is directional. Validate before external use.

INTERNAL METRICS PLACEHOLDER

Three points with data / metrics callout

Topic 1 • Topic 2 • Topic 3 | XX% • XX • XXXX — Placeholder copy and sources pending.

Why modernization has been slow and costly

Coding is one part. The harder work is rediscovering, deciding, aligning and transitioning safely.

DISCOVER AND DEFINE

01 Reconstruct business behavior

Capture processes, rules, exceptions, workarounds and controls.

02 Decide what to retain

Keep essential work; remove defects, duplication and obsolete features.

03 Align business and technology

Translate operator intent into shared designs, requirements and tests.

DELIVER AND TRANSITION

04 Untangle dependencies

Map integrations and shared data; clean inconsistent records.

05 Validate during cutover

Reconcile and test end-to-end behavior while old and new coexist.

06 Execute a safe cutover

Sequence data and users; protect operations with rollback and controls.

What modernization can unlock for the business

WHY IT MATTERS

Grow, operate and serve people better

Select outcomes that fit your business. Connect each to a measure and a specific capability.

01 Growth

New markets, products, channels and acquired customers.

02 Operating performance

Less manual work, fewer errors and shorter cycles.

03 Experience

Connected journeys, self-service and faster decisions for customers and employees.

04 Resilience

Lower risk: supported technology, stronger controls and less fragility.

05 Flexibility

Faster integration, governed APIs and data, AI readiness.

06 Economics

Retire licenses, duplicate platforms, infrastructure and legacy support.

Source: Possible value directions; choose outcomes that fit the business context.

Six common software modernization use cases

INTENTIONAL CHANGE

Change software and work

Modernize an app, platform or capability across software, architecture, data and workflow.

01 Legacy exit

Move essential behavior off unsupported or fragile technology.

02 ERP change

Replace or reshape a system of record and custom extensions.

03 Custom build

Rebuild around current rules, controls, needs and experiences.

04 Acquisition

Connect acquired systems, data and workflows to operate as one company.

05 Portfolio

Rationalize applications: remove duplication and sequence investment.

06 AI readiness

Govern APIs, data, event flows, permissions and controls for agents.

Source: Business intent: security, performance, growth, integration, AI readiness, expertise risk and cost.

The catalyst determines why modernization matters now

CATALYST	WHAT YOU HEAR	WHAT TO MEASURE
Security or end of life	Unsupported tech, vulnerabilities, audits, vendor deadline	Exposure, incidents, recovery risk, support horizon
Process friction	Manual work, duplicate entry, queues, workarounds	Cycle time, touches, exceptions, errors
Growth constraint	Slow launches, limited channels, acquisition complexity	Time to market, delayed revenue, conversion, capacity
AI readiness gap	Data, interfaces, rules or controls block AI workflows	Blocked use cases, manual decisions, control gaps
Expertise concentration	Critical rules and support knowledge sit with few people	Concentration risk, retirement horizon, recovery time
License or platform event	Renewal, forced upgrade, customization, vendor change	Five-year cost, renewal exposure, break-even
Unsustainable support cost	Scarce skills, expensive contracts, incident burden	Support labor, contract cost, incidents, enhancement cost

What happens if nothing changes in 12–24 months? The use case defines change; the catalyst creates urgency; outcomes define measurement.

Modernize the full quote-to-cash ecosystem

Connection types: API • Batch • EDI • Manual

Scope spans applications, platforms, integrations, data, business process and human handoffs.

Shared vocabulary • Connected workflow • Retain unique pricing • Standardize basics • Retire duplication • Sequence by capability

West Monroe's modernization perspective

01 AI-age imperative

14–16: Why act now, and why understanding the work matters.

02 Value-first model

17–18: Connect business priorities to the modernization approach.

03 People, process & tech

19: Advance the three dimensions together.

04 Co-build & scale

18, 20: Use an adaptable model and develop client capability.

Modernization is an AI-age imperative

WHY ACT NOW

AI changes the work—and raises the cost of delay

Faster analysis and delivery expand the choices. Delay compounds moat erosion, cost disadvantage, slower innovation and exclusion from agent-led ecosystems.

01 Agentic readiness

Prepare for AI-native competitors and agent-led ecosystems. Build readiness before structural disadvantages compound.

02 Value thesis

Tie the investment to strategic advantage, measurable outcomes, lifecycle economics, resilience and the cost of inaction.

03 Understand first

Expose undocumented code, dependencies, knowledge gaps and business–technology misalignment before choosing a path.

04 Selective change

Avoid lift-and-shift. Sequence by value and risk; redesign business, process and technology together; measure adoption and retirement.

AI changes modernization—but organizations must change the approach

Most organizations do not yet know how to capture AI's value across the modernization lifecycle.

Legacy holds the business back

Expensive, vulnerable environments slow innovation, time-to-market and developer productivity.

Lift-and-shift repeats the past

Replicating existing systems misses the chance to reimagine work for AI and create future value.

SOURCE CLAIM – VALIDATE BEFORE REUSE

60–75%

of efforts exceed budget or time, are scaled back, or deliver less value than promised.

AI CHANGES THE OPPORTUNITY

Use AI across analysis, design, build, test and transition.

Understand what to modernize, how and in what order

Without bandwidth or AI expertise, teams spend months analyzing the current state, then choose conservative paths. The result is slow, expensive change with limited business impact.

FOUR COMPLICATING FACTORS

Massive, undocumented codebases

Lost institutional knowledge

Hidden dependencies and risks

Business and technology misalignment

The right partner compresses and improves understanding—unlocking speed, confidence and better decisions throughout modernization.

Choose a business transformation partner

The right partner will help you:

-  Understand the current state quickly and accurately
-  Prioritize business value, not only technical debt
-  Move iteratively, balancing speed with control
-  Modernize and build new value together

Use an adaptable approach rather than a one-size-fits-all methodology.

Modernization that accelerates delivery and sustains value

Value first

- Prioritize value and complexity.
- Balance return and risk.
- Reduce debt continuously.

Purpose built

- Choose the right disposition.
- Preserve what performs well.
- Use coexistence and flags.

AI accelerated

- Evolve maps code at scale.
- Connect evidence to tools.
- Apply AI across the lifecycle.

Co-build & scale

- Embed teams with stakeholders.
- Flex onshore and nearshore.
- Coach and transfer knowledge.

WHY THIS MATTERS

Business outcomes guide investment and lifecycle delivery.

WHY THIS MATTERS

Keep what works; change where it drives value.

WHY THIS MATTERS

Faster insight; less tribal knowledge and manual review.

WHY THIS MATTERS

Build capacity now and capability for sustained delivery.

People, process and technology advance together

PEOPLE

Enable adoption

Bring employees and leaders into the journey. Assess readiness and change impacts early; build roles, skills, training and ownership into delivery.

WEST MONROE BRINGS — Change assessment and support from design through adoption.

PROCESS

Reimagine the work

Assess workflows, handoffs, controls and friction before changing systems. Design simpler processes around measurable business outcomes.

WEST MONROE BRINGS — Process reimagination grounded in business outcomes.

TECHNOLOGY

Keep pace with change

Choose the right modernization path and sequence. Build secure, resilient, maintainable platforms that can evolve continuously.

WEST MONROE BRINGS — A future-ready architecture and delivery posture.

Start with strategy or execution

Choose the entry point that matches your current progress. Rationalize the portfolio or begin execution with an approved backlog and direction.

INTELLI/O®
EVOLVE

START HERE — ~4-8 WEEKS

Rationalization & strategy

Prioritize applications, costs and roadmaps; assess value, health, risks and architecture. Interview owners, define dispositions, identify targets and sequence modernization. For priority apps, define target architecture and interim phases to de-risk the business case.

OUTPUTS — Candidate assessment, application dispositions, modernization roadmap and conceptual architecture.

Evolve carries context across Rationalize, Modernize and Sustain: inventory and dependencies → reports, target direction and waves → validated agent-ready context and acceptance criteria.

OR HERE — 2-WEEK SPRINTS

Execution & sustainment

Define backlog; iteratively design, build and test with GenAI. Facilitate UAT and controlled releases, using legacy–modern coexistence where needed. Transfer codebase, toolchain and operating knowledge to the client through coaching and an Enablement Playbook.

OUTPUTS — Iterative modernized releases, Enablement Playbook, continuous modernization and DevSecOps capability. Duration depends on scope.

The modernization lifecycle

01 Starting points

20, 23: Choose an entry point and consider Rationalization first.

02 Connected lifecycle

22: Show the phases, subphases and four shared decision threads.

03 AI across phases

24–25: Explain how AI helps and where human judgment stays.

04 Teaming & sustainment

26–27: Show capability transfer, roles and relative capacity.

Modernization follows a connected lifecycle

1 Rationalize

Decide what should change and why

01 Thesis alignment

Define outcomes and decision questions.

02 Assessment

Map work, systems, risks, dependencies.

03 Reimagine

Test future process and experience.

04 Plan

Dispositions, economics, roadmap, wave.

2 Build

Deliver capability in controlled waves

01 Design

Processes, architecture, prototypes.

02 Build

Bounded work from approved decisions.

03 Validate

Parity, controls, performance, acceptance.

04 Transition

Move data, operations, people in waves.

3 Sustain

Operate, evolve and retire legacy

01 Operate

Service, security, monitoring and cost.

02 Evolve

Keep knowledge and backlog current.

03 Decommission

Retire legacy after clearing dependencies.

Four threads at every gate: Business value & economics • Process & experience • People & change • Technology & delivery

Start with Rationalization to prepare the phases that follow

01 Rationalize

Typical timing: ~4–12 weeks; scope determines the plan.

- Assess value, technical health and risk.
- Interview owners; define dispositions.
- Prioritize targets and the roadmap.
- Define target architecture and business case.

OUTPUTS

Application dispositions, modernization roadmap and conceptual architecture.

02 Build

Delivery cadence: 2-week sprints; duration depends on scope.

- Define backlog and future-state design.
- Build, test and validate with users.
- Release and transition without disruption.
- Transfer knowledge and the toolchain.

OUTPUTS

Modernized releases, validation evidence, transition plan and Enablement Playbook.

03 Sustain

Ongoing: operate, improve and complete legacy retirement.

- Track business value and adoption.
- Monitor reliability and security.
- Maintain product and platform roadmaps.
- Retire legacy systems and costs.

OUTPUTS

Benefits tracking, operating model, improvement backlog and decommission plan.

AI transforms the work; leaders retain accountability

HUMAN-LED MODERNIZATION

Reconstruct, explore, prove and preserve

AI can observe work, generate alternatives, accelerate testing and manage routine maintenance. Leaders decide what changes, validate outcomes and retain operational accountability.

01 Reconstruct reality

Observe operators; map workflows, decisions and exceptions. Link business context, controls and dependencies to systems.

02 Explore futures

Generate workflow and architecture options. Prototype and simulate trade-offs; users validate before major investment.

03 Build and prove

Draft code, documentation and tests. Prepare migration data; deliver bounded increments and compare old and new behavior.

04 Preserve and improve

Preserve context. Assist routine maintenance and incident investigation with human oversight; learn from operation.

Operational evidence becomes durable capability

	FOCUS	WHAT AI HELPS DO	HUMAN JUDGMENT THAT MATTERS
	Capture expertise	Structure interviews; surface knowledge gaps without drafting every artifact from scratch	Experts validate context, nuance and meaning.
	Observe the work	Use consented recordings and artifacts to map steps, handoffs, exceptions and workarounds	Teams explain why work happens that way.
	Analyze systems	Examine source, architecture, data, integrations, risk and cost to reveal constraints	Technology leaders confirm trade-offs and boundaries.
	Co-design and validate	Create process alternatives and working prototypes; test them with users and leaders	People decide what should change and what will work.
	Transfer capability	Preserve operating knowledge, prepare roles and retain technical context	Leaders own adoption, readiness and accountability.

AI prepares evidence and first drafts. People decide what is true, what should change and when the business is ready.

Build together, then step back

West Monroe

Your team

Forming

Establish processes, architecture and technology together.

Norming & performing

Your team leads; add capacity and coach engineers.

Optimizing & sustaining

Your team sustains; plan West Monroe roll-off.

Illustrative relative capacity: scale onshore and nearshore support to need; revisit the balance at each planning horizon.

Roles shift across Rationalize, Build and Sustain

Your team provides the business context and validates outcomes throughout the journey.

	RATIONALIZE	BUILD	SUSTAIN
West Monroe	Portfolio and architecture review Business case and roadmap ● ● ● ● ●	Onshore + nearshore + offshore Design, build, test and release ● ● ● ● ●	Part-time expert support AI oversight and validation ● ● ● ● ●
Your team	Priorities and target outcomes Process and data context ● ● ● ● ●	Validates workflows and decisions Owns business trade-offs ● ● ● ● ●	Owns the product roadmap Accepts enhancements ● ● ● ● ●
AI agents	Code and dependency analysis Candidate scoring ● ● ● ● ●	Code generation and testing Documentation at speed ● ● ● ● ●	Routine sustainment automated On call, expert-validated ● ● ● ● ●

Dot scale indicates relative team size at each phase.

Double-click: Rationalize

01 Phase & outputs

29: Align the thesis, reconstruct reality and define the package.

02 Seven Rs

30: Choose a disposition; these are neutral options, not stages.

03 Process evidence

31: Combine evidence with expert review into a validated model.

04 First-wave roadmap

29: Plan dispositions, economics and an investable first wave.

Four steps make the modernization path actionable

Seven Rs give leaders a common decision language

REMOVE OR REPLACE

2 · Retire

Remove obsolete software or work

3 · Repurchase

Repurchase packaged software

PRESERVE OR MOVE

1 · Retain

Keep and manage deliberately

4 · Rehost

Move infrastructure; limit change

5 · Replatform

Replatform; preserve behavior

REBUILD OR REIMAGINE

6 · Rewrite / rearchitect

Rearchitect or rebuild software

7 · Reimagine

Redesign capability and experience

AI ACCELERATES EVIDENCE AND DELIVERY

Expose dependencies before retirement.

Compare business fit and delivery options.

Map behavior, rules and dependencies.

Generate migration assets and tests.

Expand regression coverage before release.

Draft designs, code and documentation.

Prototype alternatives and expose risk.

Apply at application, capability or module level. AI broadens the feasible set; leaders remain accountable for the choice.

Three evidence streams become one validated model

¹ Observation requires consent and privacy, security, access, retention and workforce controls.

Double-click: Modernize / Build

01 Four subphases

33: Design, Build,
Validate and Transition.

02 Agent-ready context

34: Carry evidence,
approved decisions and
traceable context.

03 Phased cutover

35: Sequence capability
waves and monitor
coexistence.

04 Human gates

33–35: Keep approval,
testing and go/no-go
authority explicit.

Design, build, validate and transition working capability

Agent-ready context reduces rediscovery from prototype to production

CONTEXT CARRIED FORWARD

Evidence database

Code, data, integrations, controls and dependencies; confidence recorded.

Business process map

Steps, rules, exceptions, users and outcomes linked to technology.

Decision trail

Approved outcomes, architecture choices, questions and expert rationale.

CONNECTED CONTEXT

■	PROCESS	business activity
■	RULE	what must stay true
■	COMPONENT	where behavior lives
■	REQUIREMENT	what must change
■	TEST	how it is proven

BUILD WORK ACCELERATED

- 1 Prototype** FASTER FEEDBACK
Options grounded in current behavior
- 2 Specify** LESS REDISCOVERY
Traceable stories and edge cases
- 3 Implement** FIRST-PASS RELEVANCE
Relevant rules and design decisions
- 4 Validation** EARLIER DEFECTS
Known states and controls become tests

GOVERN THE CONTEXT

Bounded retrieval • source links • versions • approvals • permissions • uncertainty. Human review and testing remain authoritative.

AI supports the waves; people control cutover decisions

1 Sequence

Find viable slices, expose dependencies and simulate fallback paths.

2 Prepare

Map data; draft UAT, runbooks, communications, learning and support.

3 Monitor

Compare outcomes, flag exceptions and trace anomalies to dependencies.

ILLUSTRATIVE PHASED CUTOVER

	CURRENT STATE	WAVE 1	WAVE 2	WAVE 3
CAPABILITY SLICE A	Legacy	Coexistence	Modern	Modern
CAPABILITY SLICE B	Legacy	Legacy	Coexistence	Modern
CAPABILITY SLICE C	Legacy	Legacy	Legacy	Coexistence

Source: Illustrative business-viable slices. People control go/no-go, fallback, data changes, risk acceptance and retirement.

Double-click: Sustain

01 Operate & evolve

37: Maintain ownership, service levels and measured improvement.

02 Living knowledge

37: Keep product knowledge and the backlog current.

03 Legacy retirement

37: Verify dependencies are clear before retiring cost and risk.

04 Full economics

38: Compare maintain, buy and build with a shared decision lens.

Operate, evolve and complete decommissioning

OPERATE AND EVOLVE

Improve the capability

Establish ownership, service levels, observability, security, cost management and a product backlog. AI assists triage, impact analysis and backlog development with governed context.

OUTPUT — Operating model, roadmap, measured service and business performance.

LIVING KNOWLEDGE

Preserve what matters

Keep process, rules, architecture, decisions, tests, runbooks and operating knowledge current. Reduce dependence on a few experts and give the next change a stronger starting point.

AI assists documentation and test maintenance; people govern the knowledge.

DECOMMISSION

Verify retirement

Find consumers and dependencies before removing old code, infrastructure, data paths, interfaces, jobs, licenses and support. Transfer business, control and operating knowledge that must survive.

OUTPUT — Verified retirement, closed controls, ended dual run and realized savings.

Compare three paths through one economic lens

Maintain and repair The legacy system	Buy and adapt A packaged platform	Build or rebuild Business-fit software
SHARED LENS APPLY EVERY LENS TO ALL THREE PATHS		
Delivery	Analysis, design, implementation and testing	
Controls	Data migration, integrations, security, compliance and controls	
Run costs	Licensing, infrastructure, labor, support and model/tooling costs	
Change	Process change, customization, training, adoption and workarounds	
Transition	Transition, dual run, risk, decommissioning and time to value	
Lifecycle	Enhancements, maintenance, incidents, flexibility and opportunity cost	

Apply measured AI gains to the workstreams they affect; compare full transition and operating economics, value and risk.

Modernization accelerators & assets

01 OCM AI Studio

40: Unfinished source placeholder; scope and approved claims pending.

02 Intellio Hopper

41: Unfinished source placeholder; scope and approved claims pending.

03 Intellio Evolve

43–50: Product, rationalization and delivery context.

04 Supporting assets

Confirm inventory, owners, maturity and approved claims.

OCM AI Studio

01 Change impacts

TBD: Confirm product positioning and modernization use cases.

02 Role & readiness

Confirm available insights, owner and product maturity.

03 Learning & comms

Confirm communications, learning support and demo assets.

04 Adoption measures

Confirm approved outcomes and evidence before reuse.

Intellio Hopper

01 Positioning – TBD

Confirm the role and relationship to other accelerators.

02 Modernization uses

Add approved capabilities and buyer relevance.

03 Lifecycle fit

Confirm inputs, outputs and product maturity.

04 Proof & owner

Confirm ownership and approved case evidence.

INTERNAL CONTENT PLACEHOLDER

Modernization assets — content to be developed

Prepare this section before using it in a client presentation.

Intellio Evolve

01 Platform overview

44–45: Technical evidence and business-led decision intelligence.

02 Business decisions

47: Source-backed findings; business-owned decisions.

03 Guidance

46, 48: Options, sequencing and security triage.

04 Delivery context

49: A shared foundation for delivery and operation.

Evolve links code evidence to delivery

SOURCE CLAIMS

<12 months

versus 3–5 years previously

10+

pre-built AI workflows

Up to 80%

migration / re-engineering effort

Source claims require scope, comparison-basis and external-use validation. Evolve converts tribal knowledge to structured insight and combines agentic delivery with client co-creation.

Business priorities shape the roadmap

Evolve connects priorities to processes, systems and dependencies, then proposes where to start, what to change and how to sequence. Leaders validate and own the modernization choices.

Application evidence informs guidance and sequencing

01 — BUILD AN EVIDENCE BASE

Understand the system

Inventory source, languages, frameworks, calls, data use, integrations, components and functional boundaries. Connect source code and application metadata to structural and dependency graphs. Evidence supports the options; it is more than a set of reports.

02 — GENERATE RECOMMENDATIONS

Make options reviewable

Translate evidence into options, target states and candidate work packages. Expose risks, dependencies, assumptions and uncertainty.

Transparent recommendations are reviewable starting points—not final decisions.

03 — PROPOSE SEQUENCING

Let leaders choose the path

Suggest where to start based on coupling, blast radius, feasibility and value. Product managers and architects validate context, weigh business priorities and constraints, and guide the final roadmap. Evolve accelerates human judgment; it does not replace it.

Source-backed findings lead to business-owned decisions

From scan findings to a reviewable remediation plan

STEP	EVIDENCE AND ASSISTANCE	REVIEWABLE OUTPUT
01 Normalize inventory	Organize CVEs, components, severity, scanner evidence and missing information	Structured findings inventory
02 Connect to the system	Map issues to source, dependencies, code paths, integrations and potential blast radius	Source-linked affected areas
03 Review applicability	Flag duplication, uncertain reachability, controls and false-positive questions	Questions for security specialists
04 Prioritize remediation	Consider severity, criticality, exposure, dependencies, operational risk and delay	Evidence-based candidate priorities
05 Prepare the plan	Package evidence, actions, sequence, validation tests, estimation questions and owners	Plan for specialist confirmation

PILOT: structured CVE inputs and triage artifacts exist; default production runner unavailable. Specialists confirm applicability, exploitability, remediation, testing and risk acceptance.

Shared context supports Build and Sustain

SHARED FOUNDATION

- **Source-backed evidence** from code and systems.
- **Validated process context** owned by the business.
- **Approved decisions** and current delivery artifacts.
- **Governed retrieval** connects context to bounded work.

Distinguish current product, AI-enabled delivery method and future or pilot capability requiring proof.

BUILD

HOW CONTEXT IS USED

Retrieve process, rules, dependencies and tests for bounded design, code, migration and cutover.

VALUE OPPORTUNITY

Less rediscovery, faster prototypes, targeted prompts, stronger traceability and earlier visibility of gaps.

SUSTAIN

HOW CONTEXT IS USED

Link bugs and requests to intent, architecture, decisions and tests. Support impact analysis, investigation and backlog refinement.

VALUE OPPORTUNITY

Faster investigation, preserved knowledge and potential reduction in maintenance and evolution labor.

Value compounds only while teams keep the context current, governed, source-linked and available through retrieval tools.

Industry patterns make the opportunity concrete

INDUSTRY	REPRESENTATIVE PROCESS PATTERN	MODERNIZATION CATALYST
Healthcare delivery	Access, referral, scheduling; revenue-cycle and authorization queues	Friction, acquisition complexity, staffing, patient experience
Health plans	Claims, benefit rules, enrollment, billing, prior authorization, provider data	Product speed, regulation, exceptions, AI readiness
Traditional insurance	Policy and rating, underwriting, claims, commissions	Growth, product speed, expert dependency, end of life
Consumer products	Pricing, promotion, order allocation, returns, product data, labeling	Margin leakage, slow change, channels, ERP customization
Industrial products	CPQ, engineer-to-order, production, field service, quality and traceability	Expert concentration, downtime, service growth, plant complexity

Qualify consequential work + a catalyst + opaque logic or dependencies + source and expert access + a real choice among paths.

Select one or two relevant proof stories

01 Industry fit

Match the audience and the way their business works.

02 Buyer catalyst

Match the urgency and the decision the buyer must make.

03 Lifecycle fit

Select comparable technology and modernization work.

04 Evidence status

Verify facts, qualifiers and permission before external reuse.

Strategy and build experience across industries

CLIENT DESCRIPTOR	MODERNIZATION WORK	DISTINCT RESULT OR CONTEXT
East Coast electric & gas utility	AngularJS → Angular; web servers, .NET APIs and DevOps CI/CD	Seven-year-old data staging administration app
Healthcare professional association	COBOL strategy, microservices design and decomposition plan	Core business app constrained innovation and agility
Fortune 200 electric & gas utility	AngularJS → Angular; Agile feature parity and stakeholder input	Parallel legacy/modern UI pilot for transition
Healthcare professional association	Assess and rewrite critical app; architecture, backlog and iterative build	Five-month rewrite before AngularJS end of life
Large airline	Reservation microservices; Cloud Foundry, GKE and Jenkins CI/CD	Blue/green deployment and scalable delivery practices
Lab & diagnostic testing provider	.NET MVC → .NET Core + Angular; customer success documentation	Transition plan for new UX and functionality

Internal proof selection: validate facts, context, qualifiers and permission before external reuse. Detailed source copy is retained in notes.

Software platforms modernized for business outcomes

CLIENT DESCRIPTOR	MODERNIZATION WORK	DISTINCT RESULT OR CONTEXT
Video streaming platform provider	Billing/subscriptions domain model, architecture and API modernization	Centralized logic, stronger tests and communications
Construction software provider	PRO App strategy and AI-supported modernization priorities	\$5M investment de-risked; productivity opportunities identified
Video streaming platform provider	iOS rewrite and simultaneous Apple TV app development	Rollout to millions of Apple TV users
Insurance management software provider	Prioritize features, streamline workflows and modernize technology	Improved operating capabilities and customer satisfaction
Identity & access management provider	Workshops/interviews and analysis of 1.2M+ code lines	25 initiatives; two-year roadmap; 30K annual hours opportunity
HR compliance software provider	Azure + AI/ML modernization of reporting, integrations and security	Reduced technical debt and optimized costs

Internal proof selection: identified savings or capacity opportunities are not realized results. Verify evidence and external reuse status.

Business-fit modernization spans industries

CLIENT DESCRIPTOR	MODERNIZATION WORK	DISTINCT RESULT OR CONTEXT
Packaging / shipping materials provider	Java Spring microservices integrated with new and legacy systems	Accelerated roadmap toward system retirement
Credit reporting agency	Modernized demographic-based offer management with embedded teams	Publishing: 6–8 weeks → under 24 hours
Golf club owner / operator	Booking remediation, reusable tests, LTS upgrades and CI/CD gates	10X performance gains across 10 sprints
Community bank	Application rationalization, target architecture, roadmap and maturity model	Recommended analytics, governance and technology initiatives
Property & casualty insurance provider	Cloud-first rebuild; five Windows apps integrated into one solution	Unified experience and simpler access to support/pricing
Workplace safety & compliance provider	.NET Core microservice, Azure SQL and Agile delivery; React replacement underway	Reduced risk and faster release capability

Select one or two stories relevant to the buyer. Confirm qualifiers, current implementation status and permission before external reuse.

APPENDIX – CLIENT STORIES

Detailed modernization client stories

LARGE EAST COAST UTILITY

Reduce security risk across a data staging platform

CHALLENGE

AngularJS end of life and unsupported dependencies exposed the UI, API and data layers.

PLAN

Upgrade .NET and PostgreSQL; refactor and test APIs.

BUILD

Rewrite the UI in Angular through iterative client reviews.

TRANSITION

Complete UAT, knowledge transfer, security checks and production release.

Source: supplied West Monroe case study.

RESULTS / SCOPE

57

Features identified to prioritize

CHALLENGE

A decade-old AngularJS application served six operating companies and slowed development.

675K+

Lines of code migrated

800+

Files modified

LARGE INVESTOR-OWNED UTILITY

Modernize solar workflows safely

WHAT WE DID

Select Angular for maintainability, theming and dynamic forms.

Inventory and rationalize pages; validate feature parity with business users.

Run old and new UIs side by side in a production pilot.

Source: supplied West Monroe case study.

Modernize reservation systems and deployment

CHALLENGE

Legacy reservation management needed faster delivery and scalable operations.

METHOD

Use IBM Garage practices to design, build and deploy an MVP.

ARCHITECTURE

Refactor the monolith into microservices; use Cloud Foundry and GKE.

DELIVERY

Implement Jenkins CI/CD with blue/green deployment.

Instant

Blue/green deployment capability; previously every 2 weeks

100%

Test automation goal

Create a roadmap beyond a 20-year-old COBOL core

54

Business capabilities elaborated

250

Business processes supported

45

Applications on roadmap

CHALLENGE

The core application constrained innovation, customer experience and system reliability.

WHAT WE DID

Define capabilities, reference architecture and a tactical roadmap.
Combine human-centered research with technology and change planning.
Establish governance and train teams in Agile, HCD and DevOps.

“

We have been very happy with the services we get from WMP, most importantly the thought leadership we get from your on-site team.

CHIEF INFORMATION OFFICER

Resolve end-of-life risk and move a critical app to AWS

CHALLENGE

End-of-life technologies raised security concerns in a key customer-facing application.

WHAT WE DID

Assess architecture and investment; prioritize epics, stories and acceptance criteria.

Build in Agile increments while business users test in parallel. Transfer knowledge and establish repeatable development patterns.

AWS

Replatformed

Unchanged

Project timeline and overall investment

Source: supplied West Monroe case study.

“

I particularly appreciate all the thought leadership and discussion on various strategies helping us to move our agenda forward

CHIEF INFORMATION OFFICER

“

The WMP team are dedicated, smart, and always top-notch professionals.

VP, INTEGRATED SERVICES, LABORATORY QUALITY SOLUTIONS

Modernize the platform without disrupting active users

CHALLENGE

The application lacked mobile support; business logic in code and stored procedures created inconsistent data.

WHAT WE DID

Centralize business rules and reusable code.

Create a responsive UI on supported technology.

Improve maintainability while supporting continuity for active users.

RESULTS / SCOPE

Responsive

Mobile-ready user experience

LTS

Supported technology foundation

Source: supplied West Monroe case study.

Create a shared domain model for billing

CHALLENGE

Teams needed consistent domain language and an architecture that could support future migration.

ALIGN

Align teams around a shared model and ubiquitous language.

BUILD

Centralize business logic behind APIs.

ENABLE

Improve test coverage, onboarding and communication.

Source: supplied West Monroe case study.

CHALLENGE

Hulu needed to deliver Live TV on iOS and Apple TV with a modern application architecture.

Millions

Apple TV users reached

Swift

Modernized iOS / tvOS application

HULU • LIVE TV

Deliver Live TV on Apple platforms

WHAT WE DID

Move Objective-C code to Swift.

Use reactive application state and automated CI feedback.

Combine co-located and remote delivery in Santa Monica and Seattle.

Source: supplied West Monroe case study.

Turn technical debt into a capacity opportunity

30K

Annual developer hours identified

\$5–15M

Potential ARR over three years

CHALLENGE

A growing application estate required a practical, prioritized remediation strategy.

WHAT WE DID

Analyze 1.2 million lines of code and interview stakeholders for 25+ hours.

Identify 25 initiatives and build a two-year roadmap.

Prioritize developer capacity and revenue opportunities.

“

I'm very excited about the tech debt [remediation] project coming forward because I do believe there is much value that will be delivered.

DIRECTOR, TECHNICAL OPERATIONS

Source: supplied West Monroe case study.

De-risk the PRO App relaunch with a product-first plan

~\$5M

Initial investment de-risked

Potential

Productivity benefits require implementation

CHALLENGE

The client wanted to modernize the PRO App, reach a new user group and align the roadmap to near-term objectives.

WHAT WE DID

Use direct end-user input to prioritize epics.

Improve usability, maintenance cost and productivity.

Identify reusable modular AI assets and future productivity opportunities.

“

The team was able to come up to speed quickly, identify areas of improvement for the solution along with creating thorough documentation to support the application going forward. The team was also able to understand the business quickly and work with end users to identify future needs.

CHIEF INFORMATION OFFICER

Source: supplied West Monroe case study.

Reduce agent effort and improve renewal performance

CHALLENGE

Agents needed to offload data entry and give customers a clearer service experience.

WHAT WE DID

Research personas and map customer journeys.

Prototype improved workflows across web and native apps.

Shift data entry to customers to free agent time.

RESULTS / SCOPE

68%

Agent time savings

+5%

Renewals

Source: supplied West Monroe case study.

Improve reporting today and prepare for future AI

CHALLENGE

The reporting experience needed faster performance and a platform for future product capability.

WHAT WE DID

Use 35+ interviews to guide experience and platform design.

Mobilize an 18-person team on Azure and AI foundations.

Plan future GenAI and predictive capabilities; these are not realized outcomes.

Source: supplied West Monroe case study.

RESULTS / SCOPE

65%

Report time reduction

+\$30K

Average client savings from time saved

Scale engineering and services as the business grows

CHALLENGE

Pandemic-era revenue doubled, increasing demand on software delivery and platform capacity.

ALIGN

Build scalable engineering and Agile practices.

BUILD

Develop Java / Spring microservices.

ENABLE

Use DataStax and application-agnostic services for reuse.

Source: supplied West Monroe case study.

CHALLENGE

The caddie booking system had performance issues and relied on unsupported technology.

10x

Performance improved

~25

Opportunities prioritized

GOLF OWNER & OPERATOR

Restore booking speed and support

WHAT WE DID

Prioritize about 25 improvement opportunities; implement fixes over 10 sprints.
Add reusable tests, CI/CD gates and long-term-supported technology.
Provide ongoing nearshore support.

Source: supplied West Monroe case study.

LARGE P&C INSURANCE PROVIDER

Unify five applications into one workflow platform

CHALLENGE

Fragmented legacy applications created switching, training and support overhead.

WHAT WE DID

Consolidate workflows on a cloud platform.

Reduce multitasking and simplify training.

Improve order, support and pricing processes.

RESULTS / SCOPE

5 → 1

Apps consolidated

Unified

Workflow and cloud platform

Source: supplied West Monroe case study.

CHALLENGE

Offer changes took six to eight weeks, slowing personalization and experimentation.

6–8

Weeks to publish, previously

<24

Hours to publish, now

CREDIT REPORTING COMPANY

Publish offers in under 24 hours

WHAT WE DID

Enable demographic personalization.
Embed a Product Owner and A/B testing.
Accelerate offer publication through a modern workflow.

Source: supplied West Monroe case study.

COMMUNITY BANK

Identify IT savings and retire redundant applications

CHALLENGE

The bank needed clearer technology priorities and an architecture-led rationalization plan.

PLAN

Benchmark IT spend and define guiding architecture principles.

BUILD

Create a roadmap, governance and stronger data / analytics access.

TRANSITION

Support the technology steering committee throughout the project.

Source: supplied West Monroe case study.

© 2026 West Monroe Partners | Reproduction and/or distribution without West Monroe Partners' prior consent is prohibited.

RESULTS / SCOPE

\$2.77M

15% IT reductions identified

6

Apps retired

\$350K

Realized annual savings from retirements

Modernize occupational health as a separate domain

CHALLENGE

A dated monolith made releases risky and domain upgrades difficult.

WHAT WE DID

Completed: occupational health .NET Core microservice + Azure SQL.

Ongoing: React replaces internal and client ASP.NET pages.

Planned: Azure Data Factory migration + downstream updates.

50+

Features identified

Source: supplied West Monroe case study.

“

The WM team has provided great value in the organization and knowledge they bring to the table.

SR. DIRECTOR, PRODUCT MANAGEMENT

“

The West Monroe resources that have been assigned to this engagement have been outstanding.

DIRECTOR, SOFTWARE ENGINEERING

Bring one consequential application or process

QUALIFY THE CATALYST

Decision window

A catalyst creates a real decision window within 12–24 months.

QUALIFY THE UNKNOWN

Opaque logic

Rules, dependencies, integrations, exceptions or workarounds are poorly understood.

NOMINATION PROMPT

One app, one process

Where does it constrain growth, operations, risk, cost, experience or AI readiness?

- Thesis and scope
- Source-backed uncertainty baseline
- Connected app and process view
- Disposition and target comparison
- First-wave and business-case outline

QUALIFY THE CHOICE

Real alternatives

More than one modernization path is genuinely open.

QUALIFY THE ACCESS

Experts and evidence

Business and technology owners provide source, artifacts, operators and experts.

Proposed sprint returns require delivery and commercial validation. Bring one account, application and process to the modernization and Evolve team for qualification.

INTERNAL CONTENT PLACEHOLDER

Case studies — content to be developed

Prepare this section before using it in a client presentation.

Off-the-shelf modernization offerings

01 Offer catalog – TBD

Add approved offer names and owners; the catalog is unfinished.

02 Buyer & catalyst fit

Confirm entry criteria and the common buyer need each offer answers.

03 Scope & deliverables

Define approved scope, timing, outcome and commercial model.

04 Next phase

Explain the lifecycle handoff and supporting proof after approval.

INTERNAL OFFER PLACEHOLDER

Intellio Evolve capability development

9-month access and support — scope and approved offer content pending.

Build knowledge capture, then sustain

The Code Insights & Enablement Pod develops internal capacity to use Intellio Evolve and self-lead legacy-portfolio knowledge capture.

INTELLIO®
EVOLVE

MONTHS 1–3 – \$235,000 FIXED PRICE

Insights & Enablement Pod

Evolve guidance, coaching and hands-on enablement for client-led knowledge capture.

TEAM — Technical Lead + Nearshore Senior Engineer full-time; Oversight / SME as needed.

OPTIONAL DISCOVERY — Portfolio assessment, backlog and modernization path. Separate monthly capacity rate.

MONTHS 4–12 – FEE TBD AFTER PHASE 1

Sustainment & transition

Office hours, light advisory/training, product support and usage guidance; enhancements and upgrades as capacity allows.

TEAM — Technical Lead + Nearshore Senior Engineer 8 hrs/week each; Oversight / SME as needed.

OPTIONAL EXECUTION — Dedicated coding, testing and validation pod. Separate monthly capacity rate.

Working draft: Evolve access, cloud/model costs, sustainment capacity, optional discovery and execution remain separable contract components. Validate commercials before external reuse.

Turn software intelligence into business-aligned action

BUYER NEED	CODE INTELLIGENCE TOOLS	EVOLVE + EXPERT PRACTITIONER
Portfolio & cloud readiness	● ● ● Portfolio and cloud intelligence	● ● ● Business-prioritized portfolio plan
Architecture & dependencies	● ● ● Architecture and data flows	● ● ● Expert-validated architecture
Functional understanding	● ● ● AI rules and specifications	● ● ● SME-validated functional model
Business value alignment	● ● ● Scoring and decision evidence	● ● ● Value thesis and decision rights
Target state & roadmap	● ● ● Roadmap and target-state inputs	● ● ● Approved target state and roadmap
Execution & governance	● ● ● Ecosystems and handoffs	● ● ● Accountable delivery and transfer

Depth: 1 baseline, 2 enhanced, 3 comprehensive—not complete capability. CAST/alternatives represent software intelligence; Evolve includes practitioner guidance and execution support.

INTERNAL OFFER PLACEHOLDER

Standard modernization rationalization

Approved scope and offering detail pending.

Connect application decisions to future business workflows

OBJECTIVE	WORK	DECISION-READY OUTPUT
Prioritize the portfolio	Confirm apps, ownership, costs, roadmaps and planned change	Portfolio fact base
Assess value and risk	Evaluate health, dependencies and architecture fit with owners	Business value, health and risk profiles
Reconstruct the process	Map workflows, handoffs, exceptions, pain and app touchpoints	Current-state workflow map
Define dispositions	Create and socialize choices; identify modernization targets	Application disposition register
Reimagine future work	Design business-fit workflows, architecture, interim states and waves	Workflow vision, roadmap and conceptual architecture

Executive decision: approve strategy, refine scope or begin execution. Outputs carry into delivery as priorities, process vision and architecture guardrails.

Build evidence and a decision-ready strategy in 6–8 weeks

WORKSTREAM ACTIVITY	W1	W2	W3	W4	W5	W6	W7	W8	PRIMARY OUTPUT
Scope + decision criteria									Scope and decision criteria
Costs + ownership + roadmap									Application portfolio fact base
Business value + strategic fit									Business value profile
Technical health + dependencies									Technical health and risk profile
Owner interviews + pain points									Validated owner insights
Initial app dispositions									Application disposition register
Architecture alignment									Architecture principles and constraints
Targets + modernization waves									Prioritized modernization roadmap
Target + interim architecture									Conceptual future-state architecture
Executive strategy review									Approve / refine / begin execution

Blue = scheduled. W1–4 core; W5–8 strategy deepening as needed. Outputs become delivery priorities, architecture guardrails and decision criteria.

Build a focused first-call proposal

START WITH FIVE SLIDES

Use this path as a starting point. Tailor the proof and depth to the buyer's catalyst and role. This is a suggested story, not a required full-deck sequence.

SUGGESTED FIRST-CALL FLOW

01 Opener

Set the context for the conversation

02 Economics shift

Why modernization economics changed

03 West Monroe perspective

How we approach the opportunity

04 Lifecycle

Show the relevant modernization phase

05 Relevant proof or offer

Select one matching case study or offer

TAILOR THE DEPTH

1. Match the buyer and catalyst.
2. Explain why modernization matters now.
3. Choose relevant proof and depth.
4. Tailor the story to the buyer's role.

INTERNAL ONLY – THIS FIVE-SLIDE PATH IS A STARTING POINT; REMOVE INTERNAL GUIDES BEFORE EXTERNAL USE.
