

Reduce security risk across a data staging platform

CHALLENGE

AngularJS end of life and unsupported dependencies exposed the UI, API and data layers.

FOUNDATION

Review code and dependencies; choose .NET, migrate PostgreSQL and refactor/test APIs.

SUPPORTABLE STACK

Updated .NET/PostgreSQL and tested APIs.

UI REBUILD

Iteratively build and test the Angular UI with client reviews.

REWRITTEN UI

Reviewed Angular functionality.

PRODUCTION TRANSITION

UAT, knowledge transfer, security checks and production deployment.

RELEASE READINESS

Production deployment, acceptance testing and retrospective.

APPLICATION FEATURES

Initial modernization inventory: features to prioritize for modernization.

De-risk the PRO App relaunch

CHALLENGE

The client wanted to modernize the PRO App, reach a new user group and align the roadmap to near-term objectives.

WHAT WE DID

Product-first epics from end-user input; prioritize usability, maintenance cost and productivity; identify reusable modular AI assets.

“

The team was able to come up to speed quickly, identify areas of improvement for the solution along with creating thorough documentation to support the application going forward. The team was also able to understand the business quickly and work with end users to identify future needs.
